

'Neither shouting'	'Aisha shouting'	'Charlie shouting'	'Both shouting'
10 per cent: 0	10 per cent: 1	10 per cent: 0	95 per cent: 1
$0 \rightarrow 1$	$0 \rightarrow 1$	$1 \rightarrow 1$	$1 \rightarrow 1$

Under these rules, Charlie tries never to raise his voice in response to Aisha and makes sure that if he does (mistakenly) raise his voice (which happens 10 per cent of the time), he tries to immediately stop. But Charlie also realizes that if both of them are shouting, then it is going to be hard to stop, so the same rule as before applies in this case.
